

Lockout for pneumatical elements A

ART01081

FEATURES

- This device is designed to isolate pneumatic power sources quickly and easily. The system locks the male connector.
- Suitable for the locking of 3 different types of connectors: type C (6 mm), type D (9 mm) and type E (12 mm).
- Locked by using a maximum of two padlocks with a maximum shackle diameter of 7 mm. It can also be locked with a padlock, using the other hole to hang the tube along with the locking device near the locked equipment.
- Made of high strength resin, especially designed to resist high temperatures and chemical and / or corrosive agents.
